

Press release

light+building becomes "KNX city" once again in 2014

Wide range of presentations and events testifying to KNX's role as the leading standard worldwide / Major celebrations in the form of the Top Event and KNX Award Ceremony

This year KNX will once again be represented at the light+building trade fair in Frankfurt (30 March - 4 April 2014) in a manner befitting of its status as the world's leading standard for home and building control. The three letters of the KNX name will be emblazoned in eye-catching locations in several of the halls at the fair, for example in the popular Galleria, where the KNX Association is building the "KNX city" on an area covering some 700 square metres. Topics addressed in the KNX city will include "Energy management in the city of the future", "The new KNX software ETS5 and the new ETS apps", "KNX Championship – the KNX competition", and – in due recognition of the forthcoming 2014 Football World Cup in Brazil – the "KNX Football Championship", a very special football competition for visitors to the fair. The Association will also be offering visitors special trade fair discounts on ETS software plus half-hour KNX training sessions, while KNX Professionals will be presenting twelve new applications for use with the increasingly popular global standard KNX. Info at www.knx.org/lb2014.

In 2014 the KNX Association will have four stands at the fair, spanning a total area of more than a thousand square metres. In addition to the KNX city there will also be the Members' Stand in Hall 8 (Stand F98) manned by 20 KNX members from ten different countries, a joint stand with the central associations of the German electrical engineering and electronics industry (ZVEI) and the German electrical trade (ZVEH) in Hall 9 (Stand B30), and a KNX information stand in Hall 11.1 (Stand C92).

Latin American spirit will be out in force at light+building, because a samba dancing troupe is coming to the fair. South America is important for KNX not only because of this year's Football World Cup, but also because of the five new KNX national groups that have recently been founded on the South American continent: KNX will in future be represented with a national group in Brazil, Argentina, Chile, Colombia and Uruguay.

An absolute highlight of the fair will be the KNX Top Event on Tuesday 1 April 2014, which will include the KNX Award Ceremony. Entries have been received this year from as many as 60 different countries. 2014 is the Awards' tenth year, meaning they are now a very firm fixture on the KNX calendar. This time there will be a brand new

highlight, however, in the form of the People's Choice Award, the winner of which will be selected by internet voting. The Top Event, which once again takes place in the Panorama hall in Frankfurt Exhibition Centre's Forum building, will finish with a lively after-show party.

ETS5, the latest version of the KNX software, will also be debuting at light+building 2014. This standardised tool, currently available in 17 languages, can be used for the installation of more than 7,000 KNX-certified devices from around 350 well-known manufacturers. The new edition of Engineering Tool Software (ETS) is the first to permit the quick, simple integration of wireless KNX components in KNX installations. Its database management system has additionally been simplified, and a new dongle introduced that gives users of the software even greater flexibility in handling projects.

KNX's leading position in the market will also be reflected in the large number of KNX members who have their own stands at light+building, the world's largest trade fair for light and building technology, where they will be presenting products and solutions for KNX installations. There will be more than 180 such stands, which the KNX members will use to demonstrate the comfort, convenience, safety, security and energy efficiency that can already be achieved using KNX.

About KNX

KNX Association is the creator and owner of the **KNX** technology – the worldwide STANDARD for all applications in home and building control, ranging from lighting and shutter control to various security systems, heating, ventilation, air conditioning, monitoring, alarming, water control, energy management, smart metering as well as household appliances, audio/video and lots more. **KNX** is the worldwide standard for home and building control with a single, manufacturer independent design and commissioning tool (ETS), with a complete set of supported communication media (TP, PL, RF and IP) as well as a complete set of supported configuration modes (system and easy mode). **KNX** is approved as a European (CENELEC EN 50090 and CEN EN 13321-1) and an International standard (ISO/IEC 14543-3). This standard is based upon more than 23 years of experience in the market. More than 330 member companies worldwide from different application domains have almost 7000 **KNX** certified product groups in their catalogues. The **KNX** Association has partnership agreements with more than 40,000 installer companies in more than 125 countries.
